this book describes the developmental process of the brain of the medaka fish it
aims to understand the brain structure of vertebrates including humans by taking
the brain of the medaka fish as an example and showing its actual developmental
process from developmental and evolutionary viewpoints the understanding of the
brain proceeds from simple to complex structures fish retain the basic form of
vertebrates and their brain morphology is relatively simple therefore the fish brain

is useful in understanding the brain structure this book is unique for describing the entire process of the brain development in a specific fish in addition the book introduces the readers to a new concept of hourglass of brain morphogenesis concerning the general rule of brain morphogenesis in vertebrates the authors propose that the brain morphology is highly conserved at the middle developmental stage but diverges more extensively at earlier and later stages the new concept challenges the accepted theory that has been widely shared for about 200 years since k von baer 1828 1837 and k von kupffer 1906 who proposed that three primary brain vesicles at earlier developmental stages develop into five secondary brain vesicles at later developmental stages in all vertebrates the book provides a basic understanding of the vertebrate brain and is useful for all readers who wish to understand the complex structure of the brain

most parents today have accepted the message that the first three years of a baby's life determine whether or not the child will grow into a successful thinking person but is this powerful warning true do all the doors shut if baby's brain doesn't get just the right amount of stimulation during the first three years of life have discoveries from the new brain science really proved that parents are wholly responsible for their child's intellectual successes and failures alike are parents losing the brain wars no argues national expert john bruer in the myth of the first three years he offers parents new hope by debunking our most popular beliefs about the all or nothing effects of early experience on a child's brain and development challenging the prevailing myth heralded by the national media head start and the white house that the most crucial brain development occurs between birth and age three bruer explains why relying on the zero to three standard threatens a child's mental and emotional well being far more than missing a few sessions of toddler gymnastics too many parents educators and government funding agencies he says see these years as our main opportunity to shape a child's future bruer agrees that valid scientific studies do support the existence of critical periods in brain development but he painstakingly shows that these same brain studies prove that learning and cognitive development occur throughout childhood and indeed one's entire life making hard science comprehensible for all readers bruer marshals the neurological and psychological evidence to show that children and adults have been hardwired for lifelong learning parents have been sold a bill of goods that is highly destructive because it overemphasizes infant and toddler nurturing to the detriment of long term parental and educational responsibilities the myth of the first three years is a bold and controversial book because it urges parents and decision makers alike to consider and debate for themselves the evidence for lifelong learning opportunities but more than anything this book spreads a message of hope while there are no quick fixes conscientious parents and committed educators can make a difference in every child's life from

infancy through childhood and beyond

for the most part human capital theory emphasizes human cognitive development and the acquisition of knowledge and skills that enable enhanced productivity and earnings in light of recent research findings particularly concerning neurodevelopment and early childhood development it is becoming apparent that this standard version of human capital theory has a far too limited conception of human capabilities and how they are created integrating human capital with human development considers recently accumulated knowledge related to the human brain's functioning and development to better understand the relationship between human capital and human development in successful economies it shifts the focus of human capital theory to give full consideration to intangible non cognitive aspects of learning this exciting new volume is an important addition to the study of human capital and behavioral economics more broadly
